Hello, I'm **Sojin Oh**

Software engineer turned human-centered researcher

I spent six years building Amazon's Silk browser for Fire TV and realized what I cared about most was the people behind the screen. Now I research how people think and decide, and I bring an engineer's sense of what it takes to actually ship the answer.

Education

Sep 2026 - Now: **University of Washington** — Seattle, WA

M.S. in Human Centered Design & Engineering (HCDE)

- Coursework in Qualitative Research Methods, User-Centered Design, and Experimental Research Methods

Sep 2015 - May 2019: **Macalester College** — Saint Paul, MN

B.A. in Computer Science and Statistics

- GPA 3.90/4.00, Summa Cum Laude

UX Research Projects

Oct - Dec 2026: **Seattle Transit Decisions** — HCDE 519

Qualitative Researcher, team of 4

- Studying how Seattle residents decide whether to ride transit, combining field observation, vignette-based interviews, and elicitation of real trip histories (myORCA, Google Maps Timeline)
- Turned scattered team ideas on trust and delays into one decision-centered research question, and pushed to pair interviews with observation to catch gaps between what riders say and do

Oct - Dec 2026: **Housing That Feels Like Home** — HCDE 518

Mixed-Methods Researcher, team of 4

- Running a mixed-methods study (survey, interviews, diary study, digital ethnography) on how international master's students find Seattle housing that feels like home while searching remotely
- Framed the design question through secondary research and a 5-stage housing journey map, then broadened survey recruitment beyond HCDE to reduce sampling bias

Experience

Jul 2020 - May 2026: **Amazon** — Seattle, WA

Software Development Engineer I → II, Silk Web Browser Team

- Partnered with UX and product to redesign how customers browse the web with a TV remote, shipping browsing history and autocomplete to 100% of Silk on Fire TV customers with no drop in engagement and a measurable lift in search revenue
- Validated UI and interaction changes through A/B experiments and engagement data across continuous release cycles
- Delivered Safe Browsing on Vega OS to protect customers from harmful sites, preserving performance and UI continuity through a platform transition
- Led migration of all core Silk infrastructure services to an AWS-native architecture, improving security, performance, and reliability
- Onboarded Amazon WebView to next-generation Fire OS tablet and TV platforms aligned with AOSP standards, and improved CI/CD for consistent releases across Fire devices

Jul 2019 - Jun 2020: **Concord USA** — Hopkins, MN

Data Integration Consultant

- Translated stakeholder business needs into technical requirements, then built REST API and MuleSoft integrations connecting SAP and Salesforce

Research Methods

Qualitative: Semi-structured interviews, field observation, diary studies, digital ethnography, vignettes, media elicitation

Quantitative: Surveys, A/B testing, experimental design, statistical analysis in R and Python

Synthesis: Secondary research, journey mapping, stakeholder mapping, affinity clustering

Tools: Figma, Miro, ArcGIS

Engineering

Programming: Java, C++, TypeScript, Go, Python, R, JavaScript

Platforms & Systems: Android, Fire OS, Vega OS, AWS, CI/CD, A/B experimentation

Certifications

Google UX Design Google, issued Jun 2026

Languages

English	Fluent
Korean	Native
Chinese	Conversational
